ENSAVE now permitted to declare a CE Mark on our façade products

ENSAVE GmbH successfully passed a Factory Production Control (FPC) audit based on EN 1090-1, 1090-2 and 1090-3 without any deviations, on 31st of January 2018. The FPC certificate will be issued until mid of February 2018. The audit was conducted by TÜV Süd.

Due to our high and proven quality requirements all our façade products reached the execution class 1,2 and 3.

Definition of Execution class 3:

Execution class 3 refers to supporting structures made of steel up to strength class S700 and structural components made of aluminium alloys. Typical examples include buildings with more than 15 floors, pedestrian, bicycle, road and railway bridges, and crane tracks

With this, ENSAVE GmbH claims a CE declaration based on EN 1090 and has the right to use a CE Mark on all façade product labels. Naturally, we will not immediately alter all labels to show the CE Mark.
